

Case study: Creating a modern platform from scratch

Transforming the US healthcare insurance market at the front line

Goals & challenges

Client needed a modern technology platform on which to build & roll out its business

Must be enterprise ready, secure & scalable on day one

Client operates at the intersection of multiple regulated industries

Juxtaposition of fast-moving & pivoting healthcare tech company needing to integrate with outdated industry & processes

What we did

Built a modern platform from scratch with controls, auditability & traceability required by a highly regulated industry, in four hours, utilizing Terraform & Sentinel

Automation first principle, including hardening & compliance

Self-service DevOPS pipelines enabling business-driven deployments in minutes via Terraform & GitHub

Results

Our client is developing a healthcare system that underpins its business, streamlining the payment process between healthcare providers, insurers, employers & employees

Our work enabled a corporate pivot to covid testing & vaccines for the travel industry, state & county jurisdictions

This included becoming the primary covid testing provider for one of the largest branches of the US military
