

Clear**Foundation**

Clear**Foundation** charts the course for IT projects to meet your strategic goals. Use our analysis to get key people on side, avoid potential pitfalls and optimise project planning from the start.

Meet the demands of digital business, migrate systems to the cloud, rationalise your data centres, or outsource some of your IT to a trusted third party. Whatever you need to do, Clear**Foundation** is the quickest, most effective way to get ready.

Clear**Foundation** looks at:

- Facts
- Opinions
- Emotions
- Data

and allows our clients to make better decisions for the best outcomes.

ClearFoundation

Uncover business challenges

ClearFoundation uses a well-established methodology combining automated data analysis (from ClearInsight) and direct interviews with employees at every level. Data can be anonymised, allowing people to speak truthfully about their needs and issues, free of workplace politics. With this research, we identify major barriers to your business success and suggest actions you can take.

Link up needs and strategy

The real reasons for change can be lost during large transformation programmes, so they aren't as effective or efficient as they could be. ClearFoundation draws direct lines between your issues and our recommendations to make you a successful, business-driven organisation.

Common ground

By focusing intensely on your commercial needs, ClearFoundation identifies the root problems in an open and blame-free way. We develop a strategy that all stakeholders can support – regardless of their “tribe” – so they all benefit from IT as a service.

Rock-solid experience

Our consultants have spent their careers steering large enterprise IT and know what works, and what doesn't. ClearFoundation can underpin multi-year projects, but also identifies the quick-win opportunities that will immediately make a difference.

So don't let your IT projects sink: build a ClearFoundation
